

Dear Inspector

The proposal takes no account of the ability to supply 100 litres per person per day for the 20,000+ residents of these new homes.

Rain fall is already lower than drinking water demand in Guildford. The south east is 7% short of water and there is no plan to increase that supply in Gbc Lpa in fact twplc are taking steps to reduce current water usage to try and cope with current shortages with hose pipe ban until at least march 2023

This biodiversity net gain will have no water to sustain such biodiversity because it will be extracted for residents use. The only thing left will be cacti!
